

# Amazing new JamHub

## Silent rehearsal & group teaching

The **TourBus** (shown) is an ideal mixing system for a Roland V-Drum lab ... see November 2009 issue of ACCENT (or [www.musicednet.com/accent](http://www.musicednet.com/accent)).

The new JamHub is such an obvious and simple concept

that you would be forgiven for wondering why such a system has not existed before. But in reality there is a lot of very clever electronics in here that would have cost a small fortune (and been very bulky) only a few years ago. BreezSong LLC, makers of the JamHub™ line of products have managed to solve all the technical challenges and put together an incredibly flexible, portable and affordable system... perfect for musicians and instrumental and general music teachers.

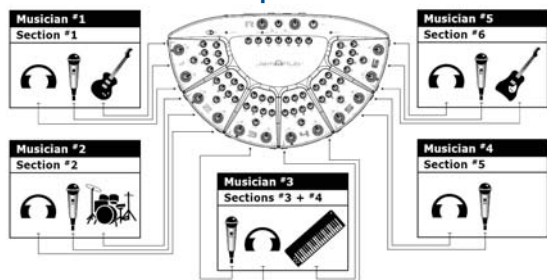

### Mix up to 7 musicians... each with their own mic and/or instrument.

The JamHub is a multi-channel mixing hub that allows up to 7 musicians to plug in a mic (including condenser mics with phantom power), an instrument and headphones. Each musician can mix the levels of all the musicians to suit him/herself and it all comes through his/her headphones. There is also a 24bit digital effects processor that can be used on the main mix and each musician can control the effects level to their own mix.

Each musician module is colour coded so you can quickly identify who is on which mixing channel... and you can even choose colour-coded JamHub cables as an option.

A Stage Control on each module allows each musician to place themselves in a virtual stage position by panning

### GreenRoom example - 5 musicians

Note: for more control musician #3 has split their instrument and vocals over two input sections.

their input anywhere across the stage, left to right.

On top of all that, you can plug in an MP3 player and there is a built-in metronome.

### 3 models add additional flexibility... and even offer digital recording capabilities

**BedRoom** - This is the basic model, accommodating up to 5 musicians including the option for one musician to perform and control his/her module remotely using an optional SoleMix controller.

**GreenRoom** - This model accommodates up to 7 musicians and allows up to 4 to work remotely via 4 SoleMix ports. One SoleMix remote is included.

The GreenRoom also comes with a USB port allowing you to record a complete stereo mix directly to computer (compatible with most recording software on PC and Mac).

**TourBus** - This model has it all and is the one that best meets the needs of middle school through tertiary applications. The TourBus includes all the features of the GreenRoom plus 2 SoleMix remotes included and a built-in digital recorder directly to SD Memory card... making it very convenient and flexible.

Supporting Music & Media in Education since 1991

### Serving ONLY...

- Schools and educational institutions
- Teachers
- Referred students

### WHAT we provide...

EVERYTHING for MUSIC, MEDIA and CROSS-ARTS TECHNOLOGY from Pre-School thru Tertiary.

- Advice & professional development guidance
- ICT & Music Technology
- Audio & Video Technology
- Lab & classroom design
- Instruments (specialising in electronic/electric)
- PA & Sound equipment
- Amplification
- Recording equipment
- Books & resources
- Cables, connectors etc
- Accessories
